

Lab Exercise – Chapter 2b

1. Show how to declare **Real** as a synonym for float (float and Real can be used interchangeably).
2. Create a union and demonstrate how changing one member affects others.
3. Show how to declare the following constants using an **enum** statement:

WINTER =1, SPRING = 2, SUMMER = 3 and FALL = 4

4. Write a C++ program that that can do simple calculator (+,-,* & /) using a class.
5. Define a class product with three members(name, cost, quantity)

and define the following functions:

- getData()
- DispData()
- calcRevenue() where $R = \text{cost} * \text{quantity}$
- calcTax()(where tax=15% of Revenue)
- calcProfit()
- Do it for 3-products
